**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or  
(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 15 and 17-19 are rejected under 35 U.S.C. 102(e) as being anticipated by Rengarajan, U.S. Patent 6,194,278.

Rengarajan shows the invention as claimed including a gate structure 18 comprised of polysilicon on a semiconductor substrate 12, the gate structure having an upper layer of a hard mask material 20, the hard mask layer is contoured such that it varies in thickness across the gate structure; and a halo implant (see fig. 1) in the semiconductor substrate, the halo implant having a depth profile under the gate structure that will inherently follow the contour of the hard mask layer (see col. 1-lines 16-45).

With respect to claim 17, the hard mask has a convex upper surface.

Concerning claim 18, this is a process limitation which is not given patentable weight in product claims.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 16 is rejected under 35 U.S.C. 103(a) as being unpatentable over Rengarajan, as cited above.

Rengarajan is applied as above but fails to show silicon dioxide being used as the hard mask layer. However, the examiner takes official notice that silicon dioxide is a well known masking material which can also be used, for example, on top of a gate to protect against ion implantation damage. In view of this disclosure, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use silicon oxide on the gate electrode for the reasons discussed above.
